Abstract (en)

[origin: EP0936302A2] The upper (18) and lower (18') lips are moved by the eccentrics (16,16') through linkages (14,14'). The eccentric shafts (16,16') extend over the machine width, with multiple and equidistant supports along their lengths. The eccentric shafts (16,16') are rotated by a geared motor. A further eccentric positions the dividing wall and blade unit.
