Abstract (en)

[origin: EP0936323A2] The holder consists of a sheet metal panel (14) connectable to a wall or facade (24), which is provided with holder members (16,18) across its surface for the elements. The members are formed by deformations in the panel material. The holder members are punched out of the panel to have a U-shaped section and are curved away from the panel. The members are offset from the panel by (90) degrees, or by some acute angle. The panel is also provided with embossings (20,22).
