Abstract (en)  
[origin: DE19647347A1] The invention relates to a wiper arm assembly for a vehicle windshield wiper device comprising a wiper arm (1) and a wiper blade (7) which are pivotally interconnected, wherein the wiper blade (7) has a supporting frame (8) and a rubber elastic wiper strip (10) supported by and inserted in the supporting frame (8) and an additional supporting device (13) which is rigidly connected to the wiper arm (1), acting upon the wiper blade (7) and supporting the latter in the direction of wiping or in the opposite direction. In order to effectively suppress undesired chattering of the wiper blade on the windshield to be wiped by using simple and cost-effective means, the invention provides that the additional supporting device (13) engages directly with the wiper strip (10). One further advantage is that the supporting device (13) engages the inner end section (12) of the wiper strip which stands out of the supporting frame and the wiper strip (10) is guided without any slack on the supporting device (13).
