Abstract (en)  
[origin: WO9819914A1] The invention relates to a device for feeding packing wrappers in a filling machine to fill liquid foodstuffs in multilayer composite packings, wherein the filling machine comprises multiple parallel-running filling lanes (F), and wherein the operator is relieved of certain tasks and the feeding of the packing wrappers is reliably performed semi-automatically or even fully automatically. This is done by a manipulator (1) that grasps one bundle (P) of packing wrappers each time and conveys it to a given filling lane (F), wherein the manipulator (1) can be displaced in a parallel direction in a horizontal plane and perpendicular to the filling lanes (F) and is fitted with means to grasp and deliver the bundles (P).
