Abstract (en)
[origin: EP0937846A2] The lock has a support part (1) spacing a lock box base in relation to a lock cover (4). The support part has a middle part determining the distance between the lock box base and the lock cover, together with end parts (17) which extend through break-throughs formed in the lock box base and the lock cover. The height of the support part together with the height of the middle part produces a total height, which corresponds to the width of the lock pocket. At least one lock pocket support (30) has a height corresponding to the width of the lock pocket and is externally fixed to the side wall of the lock box (3) located in the vicinity of the closure area.
