Abstract (en)

[origin: EP0937847A1] The retaining element (1) for fixing in the fixture slot of the window or door is spring elastically compressed at right angles to the direction of assembly and at right angles to the longitudinal axis of the fitting rail (4). Protrusions (14,15) extending in the longitudinal direction of the rail or wall outer faces of each retaining element are spring elastically pressed against the corresponding fixture slot side wall. Each retaining element is held indirectly on the rail by locking or clamping.
