Abstract (en)  
A tilt-up door system comprising a door (1) which is capable of closing an opening in a wall in use, which door (1) is capable of tilting movement from a closed position, in which it closes said opening, to an open position, in which it releases said opening, which tilt-up door system is furthermore provided with a detachably provided locking element (27), which comprises at least two bars (29,31) which can telescope one into another and which can be locked in position relative to each other, as well as locking pins (23,25) which are positioned at the bar ends that face away from each other, wherein the door (1) can be locked in its closed position by means of said locking element (27), wherein the tilt-up door system comprises two guide sections (3,5) extending transversely to the wall, in which guide sections (3,5) longitudinal sides of the door (1) are positioned in the open position of the door (1), wherein each guide section (3,5) is provided with a recess (19,21) near the wall, between which recesses (19,21) the locking element (27) extends in the closed position of the door, whilst the locking pins (23,25) are positioned in said recesses (19,21). <IMAGE>
