Abstract (en)

[origin: EP0937892A2] The pressure pipe (3) is clamped between an injector element and a connector. The pipe has a groove (7) around the end facing the connector (4). The connector has apertures (8a,b), which are located in the groove when installed. A U-shaped spring bracket (6) is pushed over apertures and groove, so that an axial positive connection is formed, and pressure pipe and connector can be turned against each other.
