Abstract (en)

[origin: EP0938100A1] The cable has a narrowing (84) of its cross-section in the middle of the cable to provide longitudinal separation between two bundles of individually insulated conductors (1a,1b). The separation between the sheath walls at the narrow part is between one and two diameters of the individual wires (2a-5a, 2b-5b), and the profile is chosen to maintain the symmetry of the cable bundles.
