Abstract (en)  
[origin: WO9819834A1] Double scissors include two mutually linked scissors (1 and 2) with blades (3, 4; 10, 11) of a different design. The screws (6 and 12) for joining the two scissors (1 and 2), which join in an articulated manner the blades (3, 4 and 10, 11) of the scissors (1 and 2) to one another, are independently adjustable. The scissors (1 and 2) are joined by an articulated bolt (20) in the area of the swivelling axis (5) around which the blades (3, 4 and 10, 11) can swivel against each other. Only one (2) of the two scissors (1 and 2) has finger rings (14). The other scissors (1) have legs (7) whose ends (9) are forked. The forks (9) surround the legs (13) of the other scissors (2) provided with rings (14), and so when the scissors (2) are actuated by means of the rings (14), the scissors (1) are also synchronically moved and to the same extent. The legs (7 and 13) of both scissors (1 and 2) are additionally joined together in the area (30) between the rings (14) and the swivelling axis (5) by adjustable joining means (35). These joining means, which join together both legs (7 and 13) of the scissors (1 and 2), can be adjustable and fixable screws (35).
