Abstract (en)
[origin: FR2756393A1] The invention concerns an interface for an interactive display device, comprising at least two levels (85, 95, 106) each with at least two objects (86-88, 96-99) capable of being displayed on the interactive display device, the interface further comprising means for successively displaying, in a same level, the whole set of objects, by displaying each object once. The objects at one level comprise at least one set of icons to be displayed on an interactive display device, and comprising a plurality of icons, each icon capable of being actuated for accessing information, and comprising an image, preferably a legend, and further preferably a pictogram representative of the nature of the information which is accessed when the icon is actuated. The use of such interfacing devices for interactive displaying of information results in obtaining interfacing devices which greatly simplify for the user the identification, and the search of information. The invention is applicable to CD-ROM's.
