Abstract (en)

[origin: WO9819445A1] The present invention relates to a service node between Internet networks and a telecommunications network, said node being used to order telephony services by means of HTML pages from a computer having a WWW browser. The invention also relates to a method for calling a B subscriber, in which the call is ordered from the computer but the connection is set up between the telephones of the A and B subscribers' telephones. The service node communicates with computers connected to computer networks using the HTTP protocol. The node stores data related to a subscriber; said data can be used when the user requests a telephony service. The node is centrally located, which enables the use of its services even if the user moves to another location and terminal.
