Abstract (en)  
[origin: EP0938860A2] At least one bearing (12,14) is integrated into the side wall and/or the floor (36) of the shower tub. Preferably the bearing is formed by a bush housed in a cavity integrally formed from the wall or floor. The side wall has a relatively thick section (50) for housing the bearing, which creates a raised profile sloping downwards away from the cavity. At least two bearings are used to mount a pair of swing doors, whose journals are housed inside the cavities and/or to mount fixed cubicle wall panels in the tub side wall.
