Abstract (en)

[origin: EP0939055A1] The fixed frame of the lifting mast is made from an external folded steel sheet (1) with a vertical opening directed to the front of the truck. The frame also has an internal reinforcing section (13) fixed to the outer section. These two sections delimit a hollow caisson (14) on the rear side of the mast. The front face of the reinforcing section serves as a track for rollers (15) with horizontal carrying spindles for an equipment carrying carriage (17).
