Abstract (en)

[origin: DE19644946A1] The invention relates to a method and a device for conveying sheets in a sheet-fed printing press. The invention provides a method and a device to convey sheets unmarked on their printing surfaces by means of conveyor and/or positioning element even when the sheet is immediately run through the printing press a second time. According to the invention, this is performed in that the sheet to be printed is exclusively grabbed by a gripping edge during its trajectory (conveyance and positioning).
