Abstract (en)

[origin: EP0940192A2] The invention relates to an apparatus for cleaning primarily the inner of containers. The apparatus comprises a foremost carriage provided with means in the form of rotating brushes and spraying pipes for cleaning of the inner of containers. The carriage is moved forward by means of wheels mounted on the carriage. Maintaining the carriage in an initial direction takes place by means of jaw-tongs mechanisms extending behind the carriage in a vertical plane and which preferably are supported by wheels. The jaw-tongs mechanisms have great rigidity in lateral direction so that the risk is very small that the carriage deviates from its course. <IMAGE>
