Abstract (en)

[origin: EP0940536A1] The stay comprises a rod (1) with a hooked end (8) to engage with one of series of holes (3a) in a rack (3) fixed to the shutter. The other end of the rod is fitted with a ball (T) engaging with a matching socket (2a) connected to the shutter surround by a fixing plate and screws (5). The socket has horizontal and vertical slots in a T-configuration that allow the rod to swing horizontally to engage with the rack and to drop vertically when not in use.
