Abstract (en)
[origin: EP0940538A2] The guide bush (11) accommodates the one end (12') of a pivot bearing axis (12), its other end (12'') locating a panel or pane band (13). A positioning screw (14) is available, the rotation of which adjusts the axial position of the pivot bearing axis relatively to the frame band (10). The positioning screw is inside the guide bush and from there axially supports the pivot bearing axis, with which it is in threaded engagement.
