Abstract (en)
[origin: EP0940632A1] The vapor extraction hood, over a cooking stove, has two radial fans (14,16) next to each other with parallel axes. The section (32) of the fan housing (30) with the air outlet openings (50,54) can be rotated round the fan rotating axes (18,20). It gives a selective setting for the air outlet openings (50,54) to be aligned forwards to give air recirculation, and to the rear for air extraction.
