Abstract (en)

[origin: EP0941014A2] The hearing aid system has two hearing aids each with a microphone, a signal processor and a loud speaker. At least one connection link (2) is provided between the two hearing aids (1a,1b) for transmitting audio, control and/or processed audio signals. The connection link may be wired or wireless. Preferably the signal processing stages of the two hearing aids (1a,1b) are connected via the connection link (2). Several connection links may be provided.
