Abstract (en)  
[origin: FR2756811A1] The invention concerns a device for dispensing fluid products, comprising a dispensing member (1), such as a pump, mounted on a container (2), and an actuating member (3), such as a thruster, for dispensing the product. The device comprises two reservoirs of products (10, 20) arranged such that they are successively emptied, the product contained in the second reservoir (20) being dispensed only when the first reservoir (10) is empty, characterised in that the first reservoir (10) is fixed to the body of the dispensing member (1) or to a support piece (9) of said body, and extends to the bottom of the container at least partially inside the second reservoir (20).
