Abstract (en)

[origin: FR2754827A1] The invention concerns the use of a recombinant nucleotide sequence containing a DNAc coding for an element of the pancreatic lipase-colipase complex of mammals or for a derived protein or polypeptide, and the elements enabling a plant cell to produce this element, or the derived protein or polypeptide, coded for by said DNAc, in particular a promoter and a terminator of transcription identified by the transcriptional machinery of plant cells, for transforming plant cells in order to obtain, from these cells, or from the plants obtained from the latter, a recombinant element of the pancreatic lipase-colipase complex of mammals, or of a derived protein or polypeptide.
