Abstract (en)  
[origin: DE19649007A1] The invention relates to a method for the production of a protecting device for optical waveguide splices. The protective device consists of two oblong wafers (3, 31) of brittle material. The wafers (3, 31) are produced with an intensity of 15-300  $\mu\text{m}$  and, during or immediately after production, are provided with a thin protecting layer (4) that prevents stress corrosion cracking.
