Abstract (en)
[origin: EP0941676A1] The boot comprises a plastic shell (1) to cover the foot and a shank (2) for the lower leg articulated to it, both having zones of varying rigidity. Zones of reduced rigidity (14, 16, 18) on the foot shell are positioned so that they leave a rigid heel section (5) which is extended forwards by an oblique lateral strip (10) carrying fastening buckles (11, 12). The shank's rigid zone has two side pieces (19) and at least one collar (20) joined at the back to the heel by a connector.
