Abstract (en)

Metal strips produced in large quantities as semi-manufactured articles are often dumped loosely and then manually sorted and stacked. The invention aims to ensure that, by means of the specially shaped stamp cutter (1), slide (5) and inspection inlet (6) of storage- and sorting part (7) which will only accept the correctly manufactured strips, that the metal strips (3) are always received and stored by storage- and sorting part (7) in such a way that they maintain their position and that at the following processing machine the full storage- and sorting part (7) can be placed on the machine adapter part (10) so that sorting, stacking and receiving can take place automatically, faster and with fewer interruptions. <IMAGE>
