Abstract (en)
[origin: EP0941814A2] The handle consists of a base body (1) of slightly convex outline for about two thirds of its length, possibly of round cross section, with a transverse hole (4) at the end of the convex region, and a turning cap (6) at the hand end. For about one third of its length towards the blade end, the handle has a covering (2) of soft plastic. This part of the handle is slightly concave in profile and preferably of round cross section. The cap may be connected to the handle by a central snap connection via a pin (5) and may increase to greater cross section towards hand end of the handle.
