Abstract (en)

The invention concerns a clip for securing a glazing bead (12) to a window frame (10) and such a glazing bead. The invention also concerns a method for mounting the glazing bead (12) to the clip. The clip is provided with first tongues (2) and second tongues (7) intended for engaging a first groove (23) and a second groove (24) in the glazing bead (12). The invention is distinguished by it being possible to mount the glazing bead (12) to the window frame (10) by moving the glazing bead (12) inward against a glass pane perpendicular to the plane of the glass pane. This means that it is possible with the same system, even with the last glazing beads (12), to assemble these in a mitre joint with adjacent glazing beads (12) at the ends of the glazing bead. Furthermore, the security against burglary through the glass pane is considerably increased as it by and large is impossible to remove the glazing bead without destroying the glazing bead (12) and removing the clips. <IMAGE>
