Abstract (en)

[origin: EP0942226A2] There is described a lighting device (1) substantially comprising a support structure (3) at least partially composed of transparent material; at least two lighting means (5) arranged inside the structure (3), and electrically supplied and activated each one independently from the others; a separator and reflecting member (7), contained inside the support structure (3), adapted to mutually separate the lighting means (5), and further adapted to selectively reflect to the outside of the device (1) the light coming from the lighting means (5). A lighting device comprising such device (1) is further described. <IMAGE>
