Abstract (en)
[origin: WO9902218A1] The present invention relates to the field of medicine and in particular to impulse magnetotherapy of biological objects. The time for administering of treatment is determined individually for each patient upon obtaining a change of a measured parameter. For a measured parameter there may be measured together or separately various physical parameters, e.g. impedance, magnetic permeability, temperature, acoustic parameter. The frequency of pulse rate of magnetic field is harmonized with biological cycle of the organ (2).
