Abstract (en)

[origin: CA2273885A1] The device comprises a dragging element (2) for dragging a thread (4) moving in a transverse direction, whereby said dragging element (2) is attached on both sides to a frame (10) by means of springs (6, 8). The device forms a system that oscillates freely at its natural frequency. Arresting devices (12, 14) can adjustably and temporarily hold the dragging element in the extreme positions.
