Abstract (en)
[origin: EP0943283A1] The invention refers to a control panel for a domestic appliance in which the casing display and control elements are fitted which are mechanically and/or electrically coupled with a printed circuit board in a pick-up casing and/or are mechanically linked. The assembly of the control panel can be greatly simplified by the pick-up casing consisting of two shell parts which are connected on one side by means of tape hinges to form one piece and are closed on the opposite side by means of latching elements, in that the printed circuit board is held in position in the isolating area of the closed shell parts by means of fixing elements and in that in the isolating area there is an additional pick-up for a plug to the printed circuit board.
