Abstract (en)
A structure panel comprises a concave connection member (2) embedded in an upper end surface of a panel body (1), a cylinder body (3) internally provided to extend from a bottom surface of the concave connection member to a lower end surface of the panel body, and a convex connection member (4) held in the cylinder body. After the panels are arranged vertically, the convex connection member held in the cylinder body of the upper-stage structure panel is made to descend to engage with the concave connection member of the lower-stage structure panel. Thus the upper and lower panels can be connected to each other. Accordingly, it is possible to perform installation in a short time without the need of skilled worker's skill and labor, obtain a structure of great strength and provide a clean finished face. <IMAGE>
