Abstract (en)

[origin: EP0943757A1] The safety rosette beneath the closure cylinder is firmly screwed especially by two screws to the door panel. Above the closure cylinder the safety rosette is firmly connected with a covered insert bolt (14) which is pressed into a blind recess of the door panel. For firm connection of the insert bolt with the safety rosette a screw connection (15) or a press connection is available. The insert bolt on its insertion periphery (14') engaging in the blind recess is provided with projections preventing withdrawal.
