Abstract (en)
Cylinder lock comprising a safety metalwork (2), which can be secured in a door or the like, a cylinder housing (1) to be fixed in relation to said metalwork, said housing containing an inner cylinder (2) in which a key can be inserted so that the inner cylinder can be rotated and the bolt of said lock can be operated. A tilting pin (6) comprising a head (7) and a shank (8) is mounted in the cylinder housing (1) in such a way that the head (7) of the tilting pin (6) is located in a recess (5) in the wall (4) of said cylinder housing (1) and its shank (8) protrudes beyond said wall (4). The tilting pin (6) is formed such that its head (7), being received in the recess (5), protrudes in relation to the shank (8) of said tilting pin (6) at least in the direction towards said safety metalwork (3). The tilting pin (6) can comprise two cylindrical coaxial parts (7, 8). <IMAGE>
