Abstract (en)

[origin: FR2755633A1] This tool adaptable to a drilling machine or a screw driving machine for turning an object such as a clamping collar for tubes, pipes, ducts or the like, comprises a shank (1) capable of being inserted and clamped, by a first end, in the mandrel of the drilling machine or the screw driving machine and a head (2), connected to a second end of the shank (1), which comprises a cavity (4) open in the axial direction for receiving the object to be turned. The head (2) comprises, in the peripheral of the opening of its cavity (4), two recesses (E1, E2) diametrically opposite and each having a predetermined width (L1), and two supporting brackets (2A, 2B) on the side flanges of the clamping collar to be turned, respectively arranged above the two recesses (E1, E2).
