Abstract (en)

[origin: WO9920492A1] The inventive device for folding an airbag (40) has two rollers (10, 20) which are provided with a plurality of radial ridges (14, 24) on their peripheral surface and are mounted in such a way that they can turn, and in such a way that their axes (X1, X2) are at least approximately parallel with one another and the ridges (14, 24) interlock.
