Abstract (en)

[origin: WO9827222A1] The invention relates to new microorganisms which are capable of utilizing a proline derivative in the form of the racemate or its optically active isomers, of the general formula (I), in which R<1> means alkyl, acyl or hydrogen, R<2> means hydrogen or hydroxy and R<3> - NH₂, aryloxy or alkoxy, as the only source of nitrogen, the only source of carbon, or as the only carbon and nitrogen source. These microorganisms are used for new methods of production of D-proline derivatives.
