Abstract (en)

[origin: FR2753571A1] The invention concerns a method for connecting large-capacity cable screens to ensure their continuity or their earthing, and equipment used for implementing same. The method consists in baring the conductive cable screen (9) using a rubber wheel, then contacting with said screen the base of a metal piece (1) on which are successively strung an adhesive joint, an insulating shell (7), a clamp fitting (11), the metal piece (1) being arranged for receiving a socket for electrical connection (12). The invention concerns the field of industrial equipment for on-site interventions on telecommunication network cables and particularly on pressure cables.
