Abstract (en)

[origin: DE19652309A1] A specification is given of an apparatus for making contact with a part having a base, in particular a gas discharge lamp, which is constructed in a particularly simple manner, the apparatus having a two part housing (1) which is made of a dielectric material, comprising a lower part (3) and an upper part (2), the upper part having an opening (9) for the introduction of the base, the apparatus having a centre contact (11) and having an external contact (10), at least one electrical interference suppression element (13, 13', 14) being arranged in the housing (1), mounts (17) for all the components (13, 13', 14, 10, 11) with which contact is to be made and for the connecting leads (6, 7) being provided in one of the housing parts, upper part (2) or lower part (3), and enabling positioning of these components in the housing part (3), the corresponding components being connected to one another by means of clamping connectors (26) and being fixed in the housing part (3).
