Abstract (en)
[origin: EP0945094A2] The hanger has two hanger parts, one on either side of a hanging hook (2). A strap of an item of washing is clamped in a gap (9) formed on the hanger part between a sprung tongue (5) pointing towards the hanger hook and the base of a depression (6) formed on the back (4) of the hanger at each end. A funnel-like opening (7) is formed by the tongue for insertion of the item. The fixed end of the tongue is attached at the base of the depression by a semi-circular arced connecting part (8). At the end of the clamping gap and the beginning of the enlargement (10) formed by the connecting part is a stop (11), which is perpendicular to the gap, and a hook (12), which projects into the enlargement, and is spaced from the inside of the connecting part.
