Abstract (en)

Device, particularly for storage of doses of medicine and constructed in such way, and comprising such means, that it generates an acoustical and/or optical warning signal at predetermined times or with predetermined interval time periods, until the device is opened and the user takes for instance part of the contents out. The device according to the invention can for instance be used as reminding aid for regular taking of medication. Preferred embodiments of the invention are characterised by the use of a Reed contact, child-safe lock and transparency of the larger compartment of the device's lower section. <IMAGE>
