Abstract (en)

[origin: EP0945659A1] The pipe clip consists of a fixed component (1) and a detachable component, made e.g. from galvanized steel strip. Each component has recesses to receive the pipes, while fastening lugs (14a, 14b) on the fixed component engage with matching surfaces on the detachable one. The fixed component has projecting bosses (17, 18) on its inner surface, separated by a distance (d) that is smaller than the pipe diameter so that the pipe is gripped by the bosses and held in place until the detachable component of the clip has been fitted.
