Abstract (en)

[origin: DE19652057A1] Clamp clips (10) with a base plate (17) and a pair of tension elements (14, 15). The base plate (17) comprises a pair of oblong holes (16) which converge in the direction of a center line. The peripheral surface of each tension element (14, 15) is totally or partially curved. Each tension element (14, 15) is guided in one of the two converging oblong holes (16) and is oriented in such a way that its axis forms substantially a right angle in respect to the base plate (17). The tension elements (14, 15) can be displaced in each oblong hole (16) by means of a common slider (155). Spring elements (39) are located between the tension elements (14, 15) and are tensioned when the tension elements (14, 15) are displaced in the direction of divergence of the oblong holes (16).
