Abstract (en)
[origin: WO9828206A1] A containing and mixing device for a two constituent product, comprising a flexible container (1) for a first constituent, a vessel (6) for containing a second constituent, the vessel being mounted to the container and a breakable membrane (5) between the vessel and container, wherein the flexible container and membrane are arranged such that the membrane is breakable through finger pressure applied through the flexible container, so as to allow the constituent parts to be mixed within the flexible container and subsequently dispensed through the vessel.
