Abstract (en)
[origin: WO9827253A1] The invention concerns a spin-die manifold for spinning a plurality of synthetic threads with a melt-distributor block (2) which holds a spinning pump (1) and a plurality of spinning nozzles (3). According to the invention, the melt-distributor block (2) comprises two components interconnected in pressure-tight manner, distributor lines being formed by grooves in the partition line formed between the components. Each of the lines connects a melt duct leading to the spinning pump (1) to a melt duct leading to the spinning nozzle (3).
