Abstract (en)
[origin: WO9828473A1] A process is disclosed for producing industrial yarn by stretch spinning hot spun polyester filaments at speeds from 3,000 to 6,000 m/min. The filament is stretched by a delivery device (1) and by a drafting device (2). The yarn is deflected between a delivery device (1) and a drafting device (2) and slowed down by a yarn tensioner (3) which consists of deflecting rollers (31) and (32) to a speed that satisfies the following equation: $v_3 = v_1 + (v_2 - v_1) * F$, in which $0.5 \leq F < 1$. A device having a yarn tensioner (3) between the delivery device (1) and the drafting device (2) is disclosed to carry out the process.
