Abstract (en)

[origin: WO9827470A1] Disclosed is a method for operating an electrographic printer or copier, as well as a developing apparatus, wherein a layer (26) containing toner particles is deposited on a toner receiving surface (24) by means of a force field. The actual amount of toner per surface section is detected on at least one point of the layer (26). The force field is then modified in a regulator circuit (58, 50, 70, 22) according to the deviation of the actual amount of toner from a predetermined set amount of toner.
