Abstract (en)

[origin: WO9827469A1] Disclosed is a method for operating an electrographic printer or copier, wherein a first layer containing toner particles is deposited on a first toner receiving layer (46) by means of a force field. The actual amount of toner per surface section is detected on at least one point of the first layer. The force field is then modified in a regulator circuit (110, 100, 124, 38) according to the deviation of the actual amount of toner from a predetermined set amount of toner.
