Abstract (en)

[origin: DE19650903A1] The invention relates to a gas supply device for a fuel cell stack, which solves the technical problem of developing a gas supply device with a simple, low-cost design yet capable of providing the fuel cells with a reliable supply of operating materials. This is done by a gas supply device with webs (8), which are connected to the fuel cell stack (1) on an inner longitudinal edge and connected to covering plates (10, 11) along a transversal edge, which enclose the fuel cell stack (1) lengthwise. Said device also comprises an outer wall (9) secured to the outer ends of the webs (8).
