Abstract (en)

[origin: EP0947410A1] The assembly to give an elastic support to the coupling shaft (4) of a center buffer coupling, at a rail vehicle, has a collar (11) at the coupling shaft (4) with a tensioning ring (12) at the rear side. It has a ring (9) towards the opening of the buffer housing (3) at the leading side. The tensioning ring (12) applies a tension on the leading ring (9) along the coupling shaft (4) when the buffer is not under loading forces, in the direction of expected pressure and impact.
